ABOUT ME

- Final-year Computer Engineering student at GEC Gandhinagar with a strong foundation in Data Structures & Algorithms using C++. Skilled in full-stack web development with the MERN stack, including hands-on experience in building modern, responsive applications using React.js, Node.js, Express.js, and MongoDB. Proficient in both frontend and backend technologies, with a passion for creating seamless user experiences and scalable solutions. Continuously exploring new tools and frameworks, I am driven by curiosity and a commitment to delivering impactful, real-world software projects.

EDUCATION

- BE (Computer Engineering) | GEC-GN , India CGPA : 8.65 |(22-26)
- XII (GSEB) | Ashadeep Vidhyalay – 1 , Surat (80.30%|94.50PR)|(21-22)
- X (GSEB) | Ramkrushna Vidyabhavan , Surat (88.17%|99.44PR) |(19-20)

SKILLS

- Programming Languages:** C++, Python, Java
- Frontend:** React.js, JavaScript, HTML, CSS, Tailwind CSS, Bootstrap
- Backend:** Node.js, Express.js, RESTful APIs
- Databases:** MongoDB (NoSQL), MySQL, PostgreSQL (Relational)
- Version Control:** Git, GitHub
- CS Fundamentals:** DSA, OS, DBMS, OOP, CN
- Data Analysis & Scripting:** Python, Pandas, NumPy
- Cloud & Tools:** Postman, VS Code, npm, Git Bash

PROJECTS

- YouStreamPro** : Architected and developed a robust, scalable backend for a YouTube-inspired video streaming platform using Node.js, Express, and MongoDB. Designed and implemented secure JWT-based authentication, modular RESTful APIs, and middleware-driven request validation, authorization, and error handling. Integrated Cloudinary for efficient media storage and seamless video uploads. Built comprehensive features including user management, video uploads, playlists, comments, likes, and real-time analytics. Emphasized clean code practices, maintainability, and extensibility to support multi-platform streaming and future enhancements. Demonstrated expertise in backend architecture, API security, cloud integration, and building high-performance, production-ready systems.
- Social_Blog_App** : Developed a full-stack Social Blog Hub using React and Appwrite, enabling users to securely register, log in, create, edit, and delete blog posts with image uploads. Implemented role-based access control, intuitive post management, and integrated cloud storage for media handling. Designed a clean, responsive user interface with interactive components and smooth animations, showcasing strong skills in modern frontend development, API integration, and scalable application architecture.

ACHIEVEMENTS

- Winner of Ideathon** :
 - Project : Virtual reality therapy of mental and physical health** :- Conceptualized a virtual reality therapy solution aimed at improving mental and physical health, using immersive technology to propose innovative therapeutic approaches and enhance overall well-being.
- Finalist of New India Hackathon (NIH)** :
 - Project : Government Scheme Portal** :- Developed a Government Scheme Portal using Angular.js, HTML, CSS, and Express.js, contributing to both frontend and backend development. Designed and implemented a responsive user interface, integrated backend APIs for dynamic data handling, and ensured smooth interaction between client and server components. Utilized GitHub for version control and effective team collaboration.
- Coordinator** :
 - HackTheSpring'25** :- Successfully served as a core team member and coordinator for HackTheSpring'25 held from 28th Feb to 1st Mar 2025. Contributed to event planning, coordination, and participant management, ensuring smooth execution of the 3-day hackathon.
